

# Textile Business Process

## Case to be resolved:

- Client who has a retail textile shop needs 1000 quantities of T-shirts for his shop.

- Client approaching buyer for the requirement mentioned above.
- Buyer will find the right company which manufactures the T-shirt and place the order.

## Workflow and Rule Engine:

### Workflow steps:

- Companies which accept the order will start the production.
- They will decide whether the company will buy the raw material or the client will buy.
- After receiving Raw material, the company will check the quality and start the production.
- Once after the production is done Buyer or Client will check for the quality is up to the mark and receive the Items by paying cash

### Task to be carried out:

- After receiving the Raw material the first task is spinning and weaving.
- Second task is dying cutting and printing
- Finally stitching and checking

### Rule engines:

- After receiving the raw material if quality is good then the company will take that for production else the products received will be returned.
- Once after the production and checking completed from the company side the product's quality will be inspected by the client and if he is satisfied that the product will be processed for delivery else the product will again take to the production and changes will be made according to client requirement only then products will be delivered.
